

UNCLE ROY'S

Comestible Concoctions

LABELLING DECLARATION

At Uncle Roy's we pride ourselves in providing as much information on our products as possible for our customers in order for them to choose the correct product for their needs. In order to aid you in this, here is an explanation of product types on offer:

ESSENCES

- Flavourings – these are not natural
- Natural Flavourings – this is the main type of natural flavours we offer. The flavouring components are 100% from natural sources but less than 95% is from the named source so are declared as “Natural Flavouring” in the Ingredients section of our labels and in the “Label Declaration” section on all Specification Sheets
- Natural x Flavourings – we offer a smaller range of these flavours. The flavouring components are 100% from natural sources AND at least 95% from the named source. These can be labelled as “Natural x Flavourings” in the Ingredients section of our labels and in the “Label Declaration” section on all Specification Sheets, where x is the named source e.g. lemon would be labelled as “Natural Lemon Flavourings”
- Essential Oils – these are 100% essential oils so are described as (using orange as an example): “Orange Oil” in the Ingredients section of our labels and in the “Label Declaration” section on all Specification Sheets.

COLOURS

- Natural X Colour – we offer a range of these for the Food and Drinks industry which do not contain any of the Southampton Six colours. Details of all Ingredients are displayed in the Ingredients section of our labels and in the “Label Declaration” section on all Specification Sheets, where X is the named source e.g. Blue would be labelled “Natural Blue Colour” and the ingredients would show “Spirulina Extract”.
- Concentrated X Colour – we offer a range of these at much lower cost as they are not Natural. They will contain E numbers listed on the Southampton Six. Full ingredient details will be shown on the labels in the Ingredients section and in the “Label Declaration” section on all Specification Sheets, where X is the named source e.g. Blue would be labelled as “Concentrated Blue Colour” and the ingredients would show Brilliant Blue E133

***Disclaimer – This information is intended to be a general guideline, and we strongly suggest a copy of the spec is downloaded which can be found on each product page under the ‘Specification’ tab.**
